

- **1-hr workshop: Exploring Plate Tectonics Using the Global Positioning System**

This workshop was held at 5:00PM on the last day of the conference (Saturday) at one of the local hotels rather than the main conference hall. Consequently we only had three participants at the workshop.

An end-of-workshop evaluation was administered which included 8 questions rated on a scale of 1 to 5 (from strongly disagree, disagree, undecided, agree, strongly agree) and two open ended questions. Demographic information about the participants, their teaching, and their schools was collected. Both participants who filled out the survey either strongly agreed or agreed that

- the workshop was well organized and facilitated;
- they could easily apply the information/skills learned in the workshop into their teaching,
- they are more prepared to instruct about plate tectonics and earthquakes,
- they will definitely implement GPS data and plate tectonic science content into their teaching, and
- the workshop was a valuable use of their time.
